

How to submit Assignments

First, navigate to the project directory. If you dont, will lose all work once the enviroment refreshes. Will submit from this folder as well.

Creating a Bash Script

- 1) Open a text file at the bottom of the launcher
- 2) In top left type `#!/bin/bash`
- 3) Type in wanted commands
- 4) Save the file

Test Bash Script

- 1) Go to terminal from launcher
- 2) type: `'bash projects/week1-practiceLab/bash_assignment.sh'`.

- Basically, this is just the whole directory path with the file name at the end

- 3) Open new text file and type what you need to
- 4) Let's name this one `'practice_file.txt'`
- 5) Create python3 jupyter notebook and type in what you wanted (this example it was just `'hi'`)

Submitting File

- 1) Right click on the file wanting to submit
- 2) Choose `'Submit Coursera Assignment'`
- 3) Should say `'Programming file submission succeeded'`
